Team subtleAsianCoders- Matthew Chan, Eric "Morty" Lau, ray. lee., Yaru Luo

SoftDev1 pdo1

Project Name: RYthEM

Design Document

<u>Description:</u> Our website is all about music We want to create two games: HigherLower and GuessTheSong. We also want to make user accounts where you can see all the songs you've liked from the two games.

AP<u>Is</u>

- **Spotify:** Retrieves a user's playlists, songs, and recommendations

- Lyrics API: (Musixmatch) - Retrieves a song's lyrics.

Core Components

- A. Navigation Bar
 - Present on every page to connect their Spotify, view home page, play HigherLower, play GuessTheSong, and see Liked Songs.

B. User Accounts

- Users must register for an account and log in to "Heart" new songs that they might like when they're playing the games.
 - Users with accounts can view their "Hearted" songs, which will be linked to listen to the song on Spotify
- Users can also link their Spotify accounts with their accounts, and use their own music from their Spotify account in the games instead of random songs
- Don't need to register to play games

C. HigherLower

- You'll be shown two cards with the names of two songs. You simply have to decide whether the second card's number of "monthly listens" is higher or lower than the first card.
 - Data about the popularity of a song from Spotify API.
- As you progress, you will be shown a new card. Choose higher or lower to decide whether it is listened to more or less than the previous card. The objective is to get the most right in a row. If you get one wrong, you lose the game.

D. GuessTheSong

- You'll be shown the lyrics to a song. Guess what song the lyrics are from. MC.

Optional Components (if we have time)

- Allow the user to choose what genre of music they want their HigherLower or GuessTheSong games to be.
- FinishTheLyrics
 - You'll be shown the lyrics to a song with two blanks in it. Fill in the blanks.
 - Multiple choice question.
- Song Search
 - Users can search for songs to find the song's info/link to listen on Spotify or lyrics or songs similar to it.
- Use that quotes API to have motivational quotes
- Sound visualization lol

Communication App: Messenger/Discord

TASKS

- A. Project Manager (Yaru)
 - Oversees & plans incremental project development mile-marks
 - Hosts github repo
 - Helps with minor frontend/backend development
 - Updates design doc, maintains devlog
- B. Spotify login & Frontend (Eric)
 - Creates HTML templates and pages according to sitemap
 - Jinja
 - Bootstrap and custom CSS styling
 - We are using Bootstrap because we are all more comfortable with it and believe it looks better than Foundation
 - The Connecting with Spotify part
- C. Higher Lower (Raymond)
 - Write Python scripts to handle requests to modify or retrieve data from databases and Spotify API using HTTP/necessary OAuth
 - Make SQLAlchemy models for the database tables
 - Assist with retrieval from APIs using OAuth
- D. Guess the Song (Matthew)
 - Write Python scripts to handle requests to modify or retrieve data from databases and Genius API using HTTP/necessary OAuth
 - Make SQLAlchemy models for the database tables
 - Assist with retrieval from APIs using OAuth

MACHINERY

(includes functions, "utl folder, templates.)

FRONT END (client)

BACK END (server)

Play HigherLower

User plays HigherLower game

Add / retrieve data from cache
query is stored

Previous stored response is used or new response from API
query is stored

Query Musixmatch API /

Play GuessTheSong

User plays GuessTheSonggame

Add / retrieve data from cache

Musixmatch API

Previous stored response is used or new response from API query is stored

Hearted Songs

User hearts a song they hear

Query Spotify API

Spotify API

New song is added to the user's favorite songs

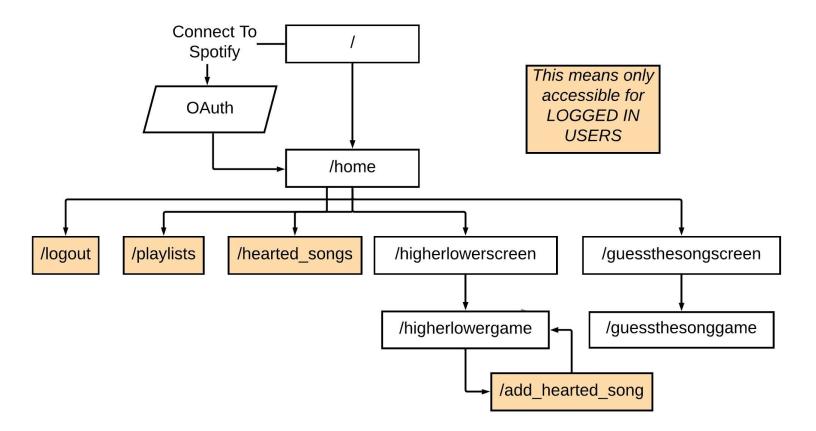

Link Spotify Account

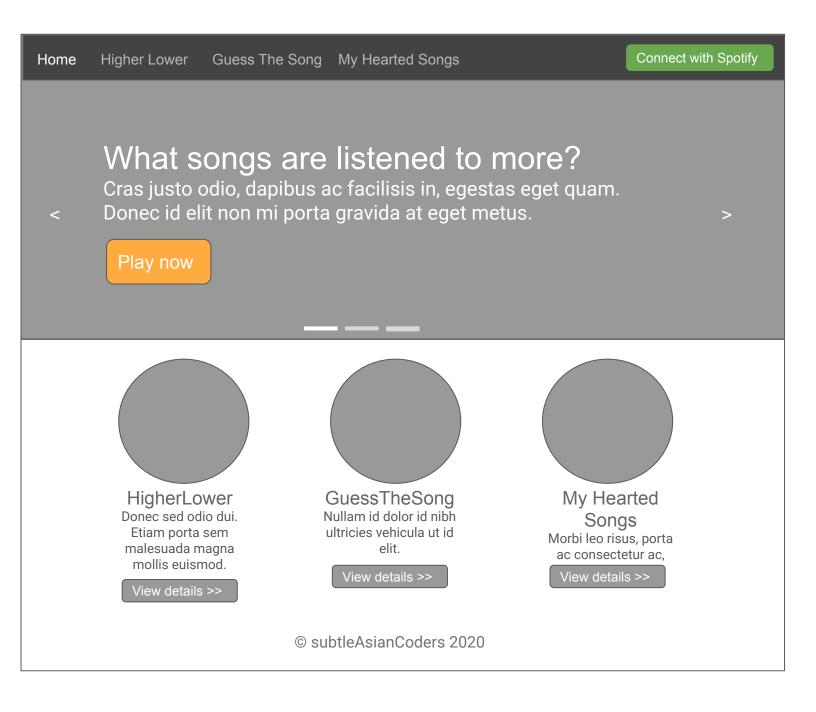

User links Spotify to retrieve their own playlists and songs

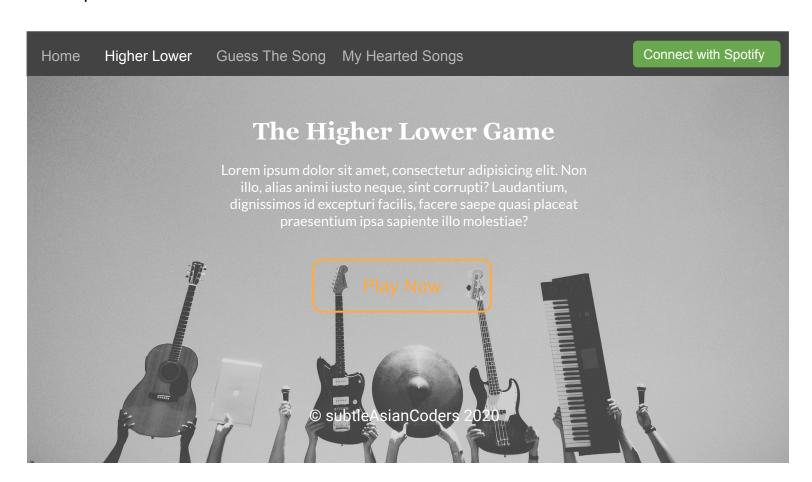

HTTP/QAuth

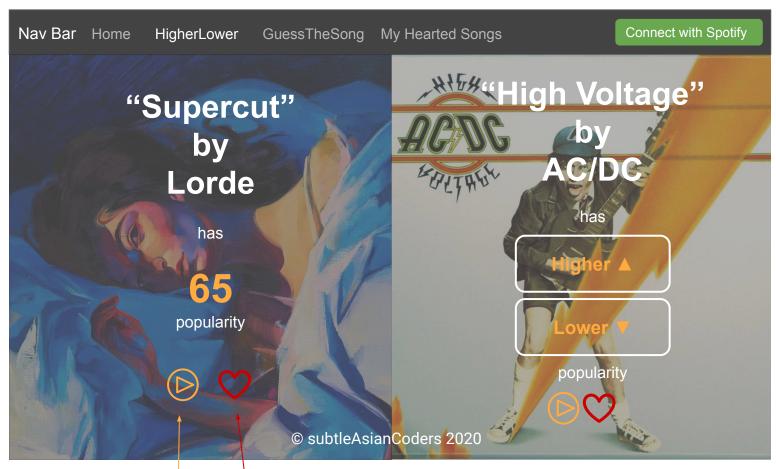

Spotify API

Using the callback URL set on Spotify Developer API, query for user's data from their Spotify account—liked songs, playlists, songs of different genres, etc.

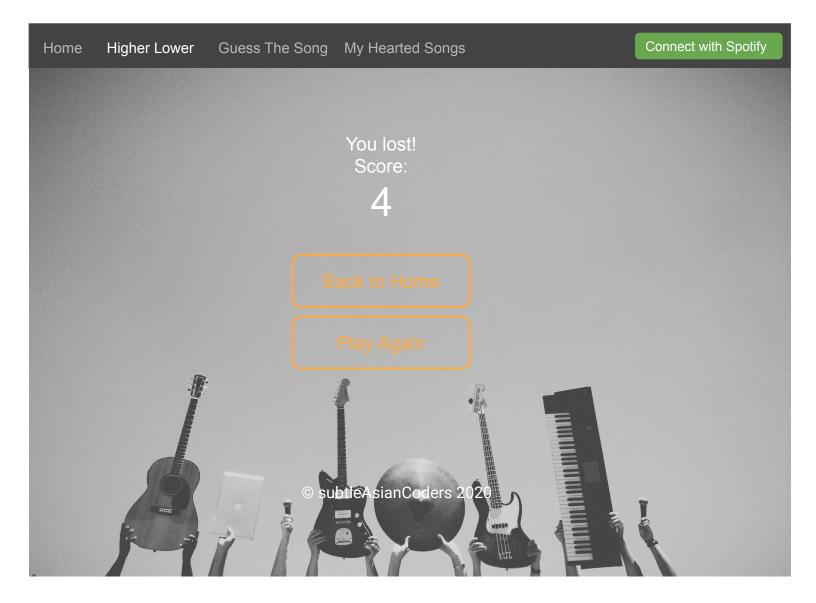

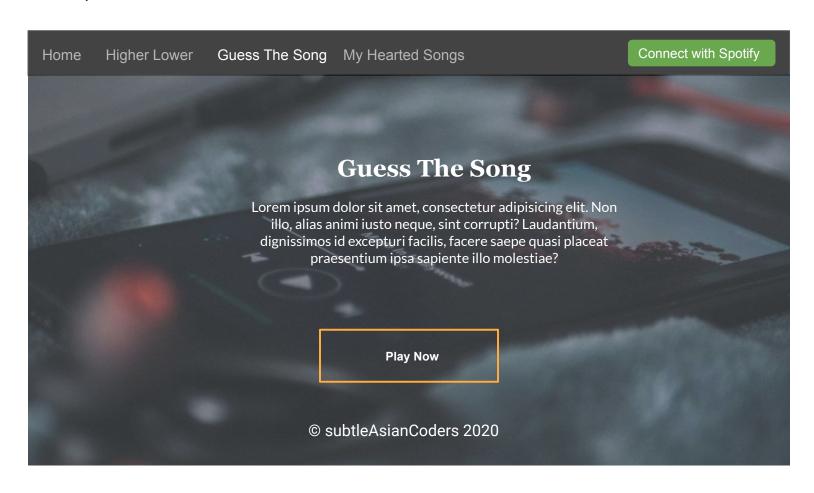

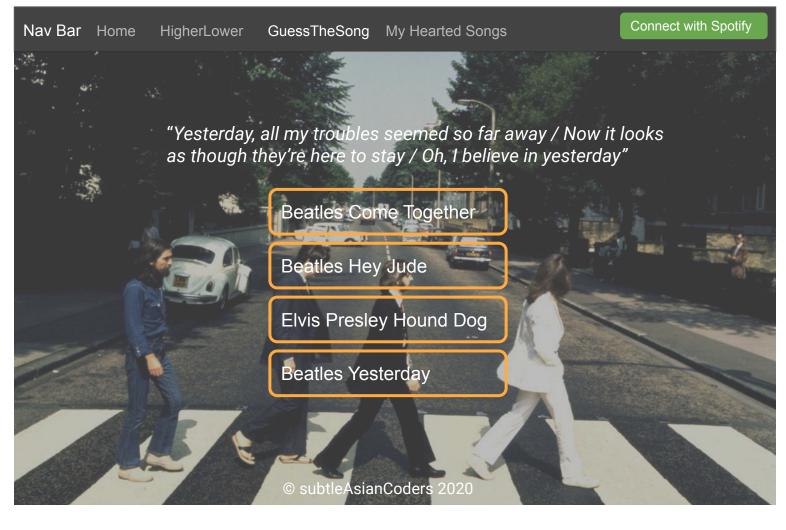

play song heart song (can only heart if logged in)

SIGN UP FOR SPOTIFY

If you click "Log in with Facebook" and are not a Spotify user, you will be registered and you agree to Spotify's Terms & Conditions and Privacy Policy.

RYthEM

You agree that Spotify Games will be able to:

View your Spotify account data

Your name and username, your profile picture, how many followers you have on Spotify and your public playlists

You can remove this access at any time at spotify.com/account.

For more information about how RYthEM can use your personal data, please see RYthEM's privacy policy.

song		
primary key	songID	INT
	albumID	INT
	artist	TEXT
	title	TEXT
	genre	TEXT
	lyrics	TEXT
out of 100	popularity	INT
unique	spotifyID	TEXT
	iframelink	TEXT

album		
primary key	albumID	INT
	title	TEXT
	coverartlink	TEXT

user songs		
primary key	usersongID	INT
	songID	TEXT
	spotifyID	TEXT

stores the coverArtLink for each album instead of per song

albumIDs are the same in the song and albums data tables songIDs are the same in the song and user_songs tables

- albumIDs act like a foreign key
 A foreign key is a column (or columns) that references a column (most often the primary key) of another table.
